

Press Release

1 Three Steps Ahead. A Portrait of Qnamic Inc.

2 Switzerland-based Qnamic Inc. has set the standard for Intelligent Resource Management
3 solutions in the railway business, and continues to shape the sector with every software release.
4 The latest triumphs are innovations in the area of integrated planning and communication: The
5 products RailOpt WEB, DIS and DSS are increasing efficiency, comfort and transparency for train
6 operators.

7 Since Qnamic Inc. created the RailOpt-Suite, the company has been the leading provider of planning
8 solutions for the transport industry. The new products, which solve problems the railway industry has
9 been facing for years, now even, extend Qnamic's lead in the area. They are now three steps ahead
10 with three paradigms that typical software companies have not learned: Knowledge of the railway,
11 Intelligent Resource Management, and now Integrated Planning & Communication.

12 Simultaneous, integrated and complete - That's the approach of Qnamic's software products, which
13 have brought efficiency and transparency to customers all over Europe. RailOpt DSS now allows
14 planners to algorithmically optimize planning results using various parameters to adjust the software
15 to the current situation, be it the creation of optimal duties or disturbance management. Being mobile
16 is now possible for train drivers with RailOpt DIS: The driver information system does away with large
17 binders and paper stacks needed to keep a train on the tracks. The software is operated from any net
18 book and always up-to-date via the internet. Comfort is a significant factor to employee satisfaction:
19 RailOpt WEB offers personnel the chance to access their upcoming work shifts, vacation and time
20 sheeting from anywhere online.

21 Qnamic's expertise lies in the railway business and software products for this sector. To be able to
22 keep what's important in focus, Qnamic has selected strategic partners to provide the implementation
23 services using their resources with project experience and special training in Qnamic's software
24 products. Working with partners, such as CSC and Logica, has also given Qnamic access to global
25 networks that allow them to expand their reach significantly.

26 Customers have seen significant improvements in their operations after implementing RailOpt
27 products. Not only are the products the way toward the future, but considering their immediate
28 usefulness and the simplicity of their implementation, a return on investment is achieved almost
29 immediately after going live.
